Project Description: Doctor & Staff Management

The **Doctor & Staff Management project** is designed to efficiently manage doctors and staff in a healthcare organization. It maintains records such as names, contact information, roles, qualifications, and experience. Administrators can easily add, update, and delete staff information.

The system also manages doctor schedules, working hours, availability, staff attendance, and duty schedules. Responsibilities can be assigned to staff members according to their roles, while doctors can be organized based on their departments and specializations.

The project reduces paperwork and minimizes errors in maintaining employee records. It provides quick access to staff information and improves communication and coordination among doctors and other staff members.
